ICPSR Processing Notes for #37288

Stress in America, United States, 2007-2023

DS24: 2022 Concerned for the Future, Beset By Inflation Dataset

1. **Confidentiality/Disclosure Risk**: In order to protect respondent anonymity and prevent disclosure risk, ICPSR recoded values in the variables **DMZIPUS**, **DMAGE**, and **Q270** in the data. **DMAGE** and **Q270** were top and bottom-coded. Valid responses in **DMZIPUS** have been replaced with "MASKED BY ICPSR".

2. **Variable Link**: The variable **YEAR** is the year-level linking variable for the cases in the data set.

3. **Non-Valid Responses**: Datasets 15 through 25 within this study contain the exact same 478 variables. This is due to the accumulation of all variables asked across the 2019-2023 surveys. With the exception of the 2019-2023 Cumulative Dataset (DS0015), each dataset will contain variables that were not asked for that year. As a result the vast majority of variables (250+) will not contain any valid responses. As a result this may or may not affect the remaining processing notes below.

4. **Variable Differences**:

    a. Several variables that occur in the data are not in the Data Collection Instrument; no further information was provided.

    b. There are slight differences with the variable names between the Data Collection Instrument and the dataset released by ICPSR; no further information was provided.

5. **Value Label Discrepancy**: The variable **Q270** has value labels which are not mutually exclusive. This discrepancy is due to **Q270** containing data from multiple years. The variable **YEAR** should be referenced when using **Q270**.

6. **Long Value Labels**: The variable **Q1557** contains value labels that are too long to properly display in the data and the ICPSR Codebook. The complete labels can be found in the Data Collection Instrument.

7. **Additional Information**: For additional information on the Stress in America Study, please visit the [Stress in America](#) website.

Variable Description and Frequencies

Note: Frequencies displayed for the variables are not weighted. They are purely descriptive and may not be representative of the study population. Please review any sampling or weighting information available with the study.

Summary statistics (minimum, maximum, mean, median, and standard deviation) may not be available for every variable in the codebook. Conversely, a listing of frequencies in table format may not be present for every variable in the codebook either. However, all variables in the dataset are present and display sufficient information about each variable. These decisions are made intentionally and are at the discretion of the archive producing this codebook.
